Read the following passage carefully and answer the questions given below it. Certain words have been printed in bold to help you locate them while answering some of the questions.

Crude oil has had a long history, and an interesting one. It is probably one single natural resource that has been instrumental in producing maximum conflicts and wars during the last century. With such a track record, it is surprising that in the given environment, wherein oil prices are breaking all records, and has become the biggest cause of concern across the globe, why is it that there is silence from some parts of the world? It is intriguing especially when some have been paying a much higher price on fuel, as compared to their poorer counterparts. It is surprising, more so, when one realizes that the number of oil producing nations is only a handful and compared to the number of oil consuming nations. While a proactive action from the mighty and powerful can bring in a huge respite for the world, why is it that they choose to be silent? Also, keeping in mind the fact that a few nations - both powerful and weak have some of the largest unused oil reserves, their silence and lack of any serious action look at the more aberrant. Looking at the manner things are shaping up, it just cannot be ruled out that possibly these nations have a definite interest in the increasing prices of oil. The question then is what could their underlying interest be? In all probability, what we are seeing right now is just a precursor to the larger picture, well laid out by them may be for the good. With rising prices, the OPEC might be delighted right now, but perhaps they are unable to see what is going to hit them. For this unprecedented rise in oil is creating a most demanding environment for alternative fuels. As and when the reserves deplete and demand really grows, more than anyone else, it is OPEC that would be badly hit, much to the glee of some nations having unused reserves which have the most to gain by using blackmailing tactics. Eventually, the countries at the receiving end would be forced to create an enabling environment for alternative energy. This trend is already visible, with India showing the way with its nuclear deal and other countries dangling the carrot of complete conversion of natural gas towards other countries in order to boost their own business. By doing so they are creating a tactical pressure on countries. As they know that the further the oil prices get pushed, the more the globe would become attracted and ready for alternative and nonconventional fuel. Moreover, for many of the countries, it might become more expensive to invest in newer technologies to conform to the emission norms than to shift to alternative sources, making the market even more attractive. And it is then that the organisations which have already invested billions of dollars in alternate fuels would mop up the global energy market completely.

The second possible reason why some nations of the world are not too enthusiastic to mitigate the price of oil is because the rising oil price is perhaps one of the major deterrents to growth of other countries. Perhaps they were hand in glove in the mechanism to raise the oil price and knowing well that this would make these nations feel the pinch. And now, the rising oil prices have put these nations in a fix. As the pressure of inflationary tendencies increases these countries cannot afford either to sit back and remain entrapped in the larger conspiracy. No wonder then that these are frantically looking around the globe - especially Africa - for newer reserves. As it is said, oil has a long history and the legacy continues.

Question 81

Which nations does the author refer to the phrase 'these nations have a definite interest in the increasing prices of oil'?

Question 136

Prabha started a business investing Rs. 32,000. After 5 months Amit joined her with a capital of Rs. 22,000. At the end of the year the total profit was Rs. 16,409. What is Prabha's share in the profit ?

A Rs. 5,284

B Rs. 11,712

C Rs. 10,182

D Rs. 4,697

E None of these

Answer: B

Explanation:

Amount invested by Prabha = Rs. 32,000 and amount invested by Amit = Rs. 22,000

Ratio of amount invested by Prabha : Amit = 16 : 11

Time period in which Prabha invested = 12 months and Amit = 76 months

Ratio of time periods of Prabha : Amit = 12 : 7

=> Ratio of profits earned by Prabha : Amit = $(16 \times 12) : (11 \times 7)$

= 192 : 77

Total profit earned = Rs. 16,409

∴ Prabha's share in the profit = $\frac{192}{192+77} \times 16,409$

= $192 \times 61 = \text{Rs. } 11,712$

=> Ans - (B)

Question 137

The simple interest accrued on an amount of Rs. 16,500 at the end of three years is Rs. 5,940. What would be the compound interest accrued on the same amount at the same rate in the same period? (rounded off to two digits after decimal)

- A Rs. 6681.31
- B Rs. 6218.27
- C Rs. 6754.82
- D Rs. 6537.47
- E None of these

Answer: A

Explanation:

Principal amount = Rs. 16,500

Simple interest earned = Rs. 5,940 and time = 3 years

Let rate of interest = $R\%$

$$\Rightarrow S.I. = \frac{P \times R \times T}{100}$$

$$\Rightarrow 5940 = \frac{16500 \times R \times 3}{100}$$

$$\Rightarrow R = \frac{5940}{165 \times 3}$$

$$\Rightarrow R = 12\%$$

Now, compound interest accrued on the same amount at the same rate in the same period = $P[(1 + \frac{R}{100})^T - 1]$

$$= 16,500[(1 + \frac{12}{100})^3 - 1]$$

$$= 16,500[(\frac{28}{25})^3 - 1] = 16,500(\frac{21952 - 15625}{15625})$$

$$= 16,500 \times \frac{6327}{15625} = \text{Rs. } 6681.31$$

Question 138

Prerna decided to donate 15% of her salary to an orphanage. On the day of donation she changed her mind and donated Rs. 1,896 which was 80% of what she had decided earlier. How much is Prerna's salary?

- A Rs. 18,500
- B Rs. 10,250
- C Rs. 15,800
- D Cannot be determined

E None of these

Answer: C

Explanation:

Let Perna's salary = Rs. $100x$

Amount which Perna decided to donate = $\frac{15}{100} \times 100x = Rs. 15x$

Amount which she actually donated = Rs. 1896

According to ques,

$$\Rightarrow \frac{80}{100} \times 15x = 1896$$

$$\Rightarrow \frac{4}{5} \times 15x = 1896$$

$$\Rightarrow 12x = 1896$$

$$\Rightarrow x = \frac{1896}{12} = 158$$

\therefore Perna's salary = $100 \times 158 = Rs. 15,800$

\Rightarrow Ans - (C)

Question 139

If the Numerator of the fraction is increased by the 600% and Denominator is increased by 200 % The resulting fraction is $\frac{4}{25}$. Then what is the original Fraction ?

A $\frac{4}{7}$

B $\frac{13}{12}$

C $\frac{11}{12}$

D $\frac{6}{5}$

E None of these

Answer: D

Explanation:

Let the numerator = x and denominator = y

If numerator is increased by 600%, \Rightarrow New numerator = $7x$

Similarly, new denominator = $3y$

$$\Rightarrow \text{Fraction} = \frac{7x}{3y} = \frac{4}{25}$$

$$\Rightarrow \frac{7x}{3y} = \frac{14}{5}$$

$$\Rightarrow y = \frac{14}{5} \times \frac{3}{7}$$

$$\Rightarrow y = \frac{6}{5}$$

\Rightarrow Ans - (D)

The present ages of Trisha and Shalini are in the ratio of 7: 6 respectively . After 8 years the ratio of their ages will be 9 : 8. What is the difference in their ages ?

- A 4 years
- B 8 years
- C 10 years
- D 12 years
- E None of these

Answer: A

Explanation:

Let present ages of Trisha and Shalini be $7x$ and $6x$ years respectively.

Acc. to ques, ratio of their ages after 8 years

$$\Rightarrow \frac{7x+8}{6x+8} = \frac{9}{8}$$

$$\Rightarrow 56x + 64 = 54x + 72$$

$$\Rightarrow 56x - 54x = 72 - 64$$

$$\Rightarrow 2x = 8$$

$$\Rightarrow x = \frac{8}{2} = 4$$

$$\therefore \text{Difference in their ages} = 7x - 6x = x$$

= 4 years

If it is possible to form a number with the first, the fourth and the seventh digits of the number 4671358, which is the perfect square of a two-digit odd number, which of the following will be the digit in the tenth place of that two digit odd number ? If no such number can be formed, give 'O' as the answer and if more than one such number can be made, give 'X' as the answer.

- A 2
- B 9
- C 3
- D 0
- E X

Answer: A

Explanation:

Number - 4671358

1st, 4th and 7th digits = 4, 1, 8

Now, if a number should be a perfect square of an odd number, then the number should also be odd, i.e. end with '1' in this case.

Numbers ending with 1 = 481, 841
