

Tips, Formulae and shortcuts for Ratio and Proportion

By

CRACKU.IN

Cracku Tip 1 – Ratio and Proportion

- Ratio and Proportions is one of the easiest concepts in CAT. It is just an extension of high school mathematics.
- Questions from this concept are mostly asked in conjunction with other concepts like similar triangles, mixtures and alligations.
- Hence fundamentals of this concept are important not just from a stand-alone perspective, but also to answer questions from other concepts

Cracku Tip 2 – Ratio and Proportion

- A ratio can be represented as fraction a/b or using the notation $a:b$. In each of these representation 'a' is called the antecedent and 'b' is called the consequent.
- For a ratio to be defined, the quantities of the items should be of same nature. We can not compare the length of the rod to the area of a square.
- However if these quantities are represented in numbers, i.e., length of a rod is a cm and area of a square is b sq.km, we can still define the ratio of these numbers as $a:b$

Cracku Tip 3 – Ratio and Proportion

Properties of Ratios :

- A ratio need not be positive. However, if we are dealing with quantities of items, their ratios will be positive. In this concept we will consider only positive ratios.
- A ratio remains the same if both antecedent and consequent are multiplied or divided by the same non-zero number, i.e.,

$$\frac{a}{b} = \frac{pa}{pb} = \frac{qa}{qb}, p, q \neq 0$$

$$\frac{a}{b} = \frac{a/p}{b/p} = \frac{a/q}{b/q}, p, q \neq 0$$

Cracku Tip 4 – Ratio and Proportion

- Two ratios in their fraction notation can be compared just as we compare real numbers.

$$\frac{a}{b} = \frac{p}{q} \Leftrightarrow aq = bp$$

$$\frac{a}{b} > \frac{p}{q} \Leftrightarrow aq > bp$$

$$\frac{a}{b} < \frac{p}{q} \Leftrightarrow aq < bp$$

- If antecedent $>$ consequent, the ratio is said to be ratio of greater inequality.
- If antecedent $<$ consequent, the ratio is said to be ratio of lesser inequality.
- If the antecedent = consequent, the ratio is said to be ratio of equality

Cracku Tip 5 – Ratio and Proportion

If a, b, x are positive, then

- If $a > b$, then $\frac{a+x}{b+x} < \frac{a}{b}$
- If $a < b$, then $\frac{a+x}{b+x} > \frac{a}{b}$
- If $a > b$, then $\frac{a-x}{b-x} > \frac{a}{b}$
- If $a < b$, then $\frac{a-x}{b-x} < \frac{a}{b}$
- If $\frac{a}{p} = \frac{b}{q} = \frac{c}{r} = \frac{d}{s} = \dots$, then $a:b:c:d:\dots = p:q:r:s:\dots$

Cracku Tip 6 – Ratio and Proportion

If two ratios a/b and c/d are equal

- $\frac{a}{b} = \frac{c}{d} \Rightarrow \frac{b}{a} = \frac{d}{c}$ (Invertendo)
- $\frac{a}{b} = \frac{c}{d} \Rightarrow \frac{a}{c} = \frac{b}{d}$ (Alternendo)
- $\frac{a}{b} = \frac{c}{d} \Rightarrow \frac{a+b}{b} = \frac{c+d}{d}$ (Componendo)
- $\frac{a}{b} = \frac{c}{d} \Rightarrow \frac{a-b}{b} = \frac{c-d}{d}$ (Dividendo)
- $\frac{a}{b} = \frac{c}{d} \Rightarrow \frac{a+b}{a-b} = \frac{c+d}{c-d}$ (Componendo-Dividendo)
- $\frac{a}{b} = \frac{c}{d} \Rightarrow \frac{pa+qb}{ra+sb} = \frac{pc+qd}{rc+sd}$, for all real p, q, r, s such that $pa+qb \neq 0$ and $rc+sd \neq 0$

Cracku Tip 7 – Ratio and Proportion

- If a, b, c, d, e, f, p, q, r are constants and are not equal to zero
- $\frac{a}{b} = \frac{c}{d} = \frac{e}{f} = \dots$ then each of these ratios is equal to $\frac{a+c+e+..}{b+d+f+..}$
 - $\frac{a}{b} = \frac{c}{d} = \frac{e}{f} = \dots$ then each of these ratios is equal to $\frac{pa+qc+re+..}{pb+qd+rf+..}$
 - $\frac{a}{b} = \frac{c}{d} = \frac{e}{f} = \dots$ then each of these ratios is equal to $\frac{(pna+qnc+rne+..)^{1/n}}{(p^nb+q^nd+rnf+..)^{1/n}}$.
 - Duplicate Ratio of a : b is $a^2 : b^2$
 - Sub-duplicate ratio of a : b is $\sqrt{a} : \sqrt{b}$
 - Triplicate Ratio of a : b is $a^3 : b^3$
 - Sub-triplicate ratio of a : b is $a^{1/3} : b^{1/3}$

Cracku Tip 8 – Ratio and Proportion

Proportions :

A proportion is an equality of ratios. Hence $a:b = c:d$ is a proportion. The first and last terms are called extremes and the other two terms are called means.

If four terms a, b, c, d are said to be proportional, then $a:b = c:d$. If three terms a, b, c are said to be proportional, then $a:b = b:c$

Cracku Tip 9 – Ratio and Proportion

Properties of proportions :

If $a:b = c:d$ is a proportion, then

- Product of extremes = product of means i.e., $ad = bc$
- Denominator addition/subtraction: $a:a+b = c:c+d$ and $a:a-b = c:c-d$
- a, b, c, d, \dots are in continued proportion means, $a:b = b:c = c:d = \dots$
- $a:b = b:c$ then b is called mean proportional and $b^2 = ac$
- The third proportional of two numbers, a and b , is c , such that, $a:b = b:c$
- d is fourth proportional to numbers a, b, c if $a:b = c:d$

Cracku Tip 10 – Ratio and Proportion

Variations :

- If x varies directly to y, then x is said to be in directly proportional with y and is written as $x \propto y$

$$x = ky \text{ (where } k \text{ is direct proportionality constant)}$$

$$x = ky + C \text{ (If } x \text{ depends upon some other fixed constant } C)$$

- If x varies inversely to y, then x is said to be in inversely proportional with y and is written as $x \propto \frac{1}{y}$

$$x = k \frac{1}{y} \text{ (where } k \text{ is indirect proportionality constant)}$$

$$x = k \frac{1}{y} + C \text{ (If } x \text{ depends upon some other fixed constant } C)$$

Cracku Tip 11 – Ratio and Proportion

Variations :

- If $x \propto y$ and $y \propto z$ then $x \propto z$
- If $x \propto y$ and $x \propto z$ then $x \propto (y \pm z)$
- If $a \propto b$ and $x \propto y$ then $ax \propto by$
